

Gentleman,

Let it be known that I am against the deployment of BPL. It has been proven again and again that BPL cannot be operated without significant interference to other HF licensees. Virtually all HF licensees are within a couple hundred feet of power lines, making it a certainty that their receiver will experience significant interference from the BPL system. As one of over a half-million Amateur Radio operators in the United States, I find this unacceptable.

The FCC is required to protect it's licensees from unlicensed interference.

Thank You.

Michael Pender  
Amateur Licensee N9IVO
